

Security

Combining security expertise and technology partnerships, RapidScale, a Cox Business company, has developed a security stack that's incredibly effective, affordable and a gateway to productivity and growth. Address vulnerabilities and compliance with our portfolio of fully managed cloud security services, designed for businesses of all sizes.

CloudSecurity

Secure your cloud and grow your business with security that stacks up.

Leading Technology

We work with market-leading security technology partners to reinforce our defenses with proven security solutions.

Efficiency

Simplify IT operations and reduce costs by consolidating multiple services into one enterprise-grade cloud service.

Data Encryption

Our data encryption and security protocols help protect your data in motion, at rest and in use, even when mobile users access systems.

Vigilant Support

We complement our robust security portfolio with a team of security experts, creating a complete security solution to protect your business.

Features

- Fully managed by RapidScale's security operations center
- SSAE 18 SOC 2- and PCI DSS-certified Tier 3 data centers
- Multi-layer defense strategy tailored to your business
- Web-based administration
- Support for compliance regulations governing retail, finance, healthcare, government, and more

Operate From a Position of Strength

A multi-layer defense strategy tailored to your business, reaching from virtual desktops to hosting your data in our Tier 3 data centers, can put you into a position that enables both business continuity and regulatory compliance.

We Take Data Security Personally

You trust us with your most valuable assets. As your partner, we treat them like they are our own. Through hundreds of engagements with businesses of all sizes, across multiple industries, we've learned how to blend risk assessment, security solutions and threat detection strategies to stay ahead of cybersecurity attacks. We implement security policies developed in collaboration with your IT team.

In addition to the security we establish by implementing virtual desktops, encryption and fully managed firewalls, we partner with leading backup and storage providers to protect mission-critical data.

Mitigate cloud risk and data mobility costs while maintaining data control across your on-premises and cloud resources.

Security Technology Partners
